In addition to our Circle of Support and "Plant-in-a-box" programs NUCONSTEEL is pleased to offer the next innovation in steel framing...

### Introducing the Complete Light Gauge Steel Framing Mobile Plant

Utilizing the fastest, most economical systems ever developed to produce light gauge cold formed steel panels and trusses for the residential and light commercial markets, The NUTRAILER Mobile Plant is a self contained production facility on wheels. This mobile plant can be customized to fit your specific fabrication needs.

The two custom built trailer options have been developed to work in conjunction with NUCONSTEEL's Automated Framing Systems and can be configured to produce steel framing for a multitude of construction markets. From steel sheds, garages, homes and mini-storage applications to light commercial structures such as hospitality, assisted living, multi-family and beyond.

The advantages of the NUTRAILER Mobile Plant are plentiful. To start with, there is the complete elimination of overhead pertaining to a fixed plant. Then there is the flexibility to roll panels and/or trusses from coil stock onsite which can result in as much as an 80% reduction in freight, or more in some cases. Then there are the savings in time and labor costs. Now, you can eliminate redundant material handling and packaging and go from fabrication to installation in one easy step. These are only a few of the remarkable benefits of the mobile plant.

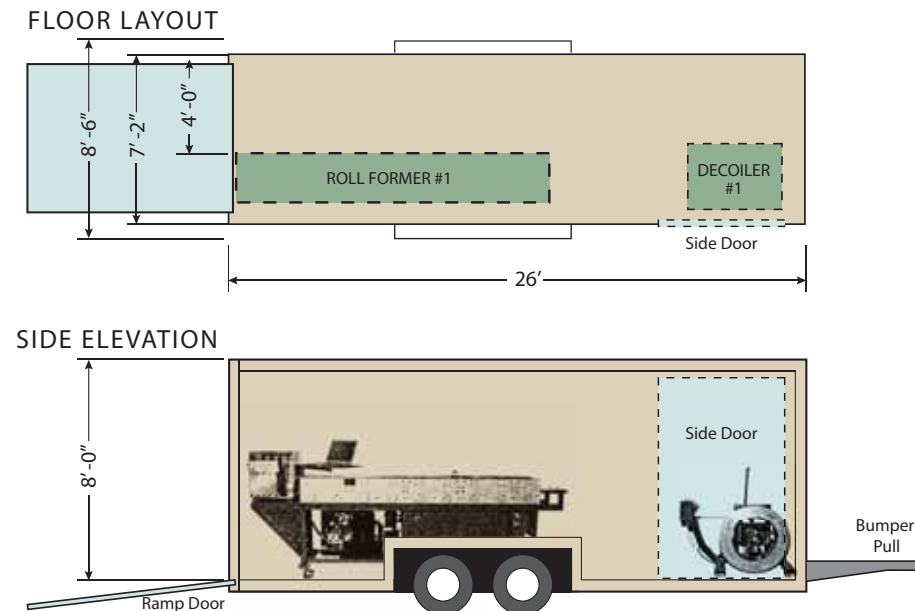

With a custom equipped NUTRAILER you can generate walls and trusses onsite faster, more economically and more efficiently than any other means available.

**NUCONSTEEL's Mobile Framing Solution is the total package for your onsite steel framing needs.**

## The NU Way to Build!

### NUTRAILER-S

#### Mobile Trailer Features

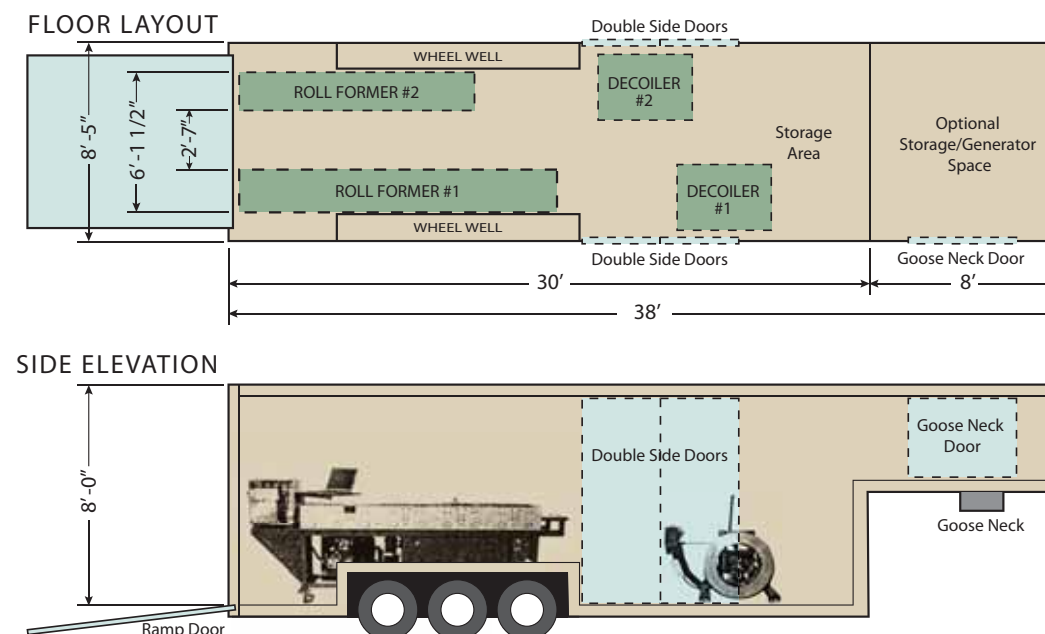

- Up to 2 Roll Forming Lines (L & LG only)
- Open Doors Unit (No A/C Required)
- Low Rider Trailer - 1' Clearance
- Double Doors (Coil Loading)
- Storage Areas
- Built-in Ramp (Rear Door)
- Interior Lighting and LED Trailer Lights
- Electrical Connections for Equipment
- Additional Electrical Outlets
- Six Manual Leveling Jacks
- Optional Power Generator (LG only)
- Completely Outfitted for Production

#### The Mobile Advantage

- Save shipping costs with fewer truckloads
- Low utility usage compared to fixed plant
- Faster, more cost effective turnaround times
- Rework last minute changes faster and easier
- Less material handling. No bundling, staging and loading of walls, trusses and material
- No yard space needed for storage of finished panels and trusses
- Less production equipment needed. (i.e. no roller tables, no material handling carts, no pallet jacks, no gantry crane, etc.)

- No delays, back charges or damage of material during transit
- Save time and money by eliminating quotes, scheduling and permits for trucks
- Eliminate material damage during offloading
- Go straight from production to erection without having to unload and shake-out panels
